Hello again, Dr. Whittlesey. I just spoke with Dr. Ziegler and she states that you must complete the IRB Approval Request form since that is our official record of the study. Your study is ready to go as soon as I have the completed form. Sorry for this inconvenience!

I thought that might be the case. I will continue processing your study. Dr. Ziegler, IRB Chair, may have additional questions once she begins her review. Thanks so much for the clarification.

Paula,

I probably should have expanded. Because we are assessing the effectiveness of general education against the program's learning outcomes based on USG and SACS requirements and our own continuous improvements, it is our understanding that we should and can assess all of our students in those courses even those below 18. However, our proposal is to use that work for publications and presentations, and that is where we need informed consent. So we will remove the data that we use for publications and presentations for those students who don't provide informed consent
